MDF-C8V1

Features

Insulation system: V.I.P. PLUS

PHCbi's advanced insulation system V.I.P. PLUS enables reducing the thickness of insulation to approximately one half compared to conventional systems. Small freezers such as MDF-C8V1 takes full advantage of this feature. Use of V.I.P. PLUS insulation material on the front, left, and right sides enables a smaller installation space with the highest-class storage capacity ratio.

New cooling circuit enables filterless structure

A new cooling circuit makes the inconvenient customer maintenance procedure of filter cleaning unnecessary.

*Cooling performance is indicated by the temperature reached at the center of the freezer [at ambient temperature of 30°C with no load]. In order to use the freezer at a stable temperature for a long time, it is recommended that the temperature be set to at least 5°C higher than the indicated lowest temperature.

In addition, depending on the usage conditions, it may not be possible to reach the indicated lowest temperature.

Caution: PHC Corporation guarantees the product under certain warranty conditions. PHC Corporation is in no way shall be responsible for any loss of content or damage to content. The battery for power failure alarm is an article for consumption. It is recommended that the battery will be replaced about every 3 years.
